

Data is gold these days and the organizations that can unlock the power of data have the competitive advantage. However, unlocking the power of data is easier said than done. Data sits in disparate sources all using different terminology to represent the same data element. Project teams end up spending countless hours trying to understand the data in system A and how it relates to the data in system B. Often this is a one-time project-based analysis that cannot be reused by other projects. Organizations are under tremendous pressure to switch from this type of project driven approach to more of a data driven project implementation.

Euryka Data Management Inc. is a SaaS provider established to offer a data catalog (aka metadata) solution to organizations struggling to govern and understand their data. Euryka is a light weight user friendly SaaS solution that allows Data Officers, IT and Business users to collaborate, understand and track critical data elements within the organization.

We target small to mid-sized organizations that are data centric and need a data catalog solution. Catalogs provided by large vendors tend to be expensive and too complex to implement in this market place. Euryka provides an alternate solution.

How are we different?

- Simplicity - Business friendly design greatly reduces costly implementation and training making adoption easier
- Accessibility - Licensing structure facilitates decentralized metadata collection so anyone with metadata can contribute
- Suitability - Fit for purpose solution with continuous feature enhancement based on user feedback

Quick View

Product:

Data catalog for metadata management

Product Milestone:

Euryka is an early-stage Startup. Version 1 of the data catalog is available for market validation.

YouTube video:

<https://youtu.be/19L8Efa6IEI>

Licensing model:

Annual license fee is dependent on the number of edit users. Some new features such as connectors for auto discovery is provided at one time additional cost.

Product Features:

- Source inventory - List of data sources and its data fields
- Business Glossary - Common business terms to achieve common language
- Consumer inventory - List of consumers and consumption details
- Common Data model inventory - Data model dictionary with details
- Mappings - Source to target mappings with transformation rules
- Administration - Entitlement by roles
- Google like search - Keyword search to find metadata
- API - Enables integration with other systems
- Tagging - Classification of metadata that is not covered by existing fields
- Lineage - Data flow or the journey of a data element
- Excel - Export and import data using Excel
- Relationship - Discover the relationships between data
- Data Quality Rule - Checks that need to be performed to ensure quality data

Customer Adoption Approach:

1. We offer a one or two-month free trial
2. An initial one-hour training and user documentation is provided
3. Customers use the tool and identify gaps and new features
4. We work with our customers to prioritize resolution to the identified gaps*
5. Agreed upon new features will be scheduled and delivered in agile fashion after license is finalized.
6. New features will be made continuously available as we evolve Euryka throughout the life of the licensing agreement
7. Support is always an email away
